

1/18 Rocket Bunny V2 86 / FRS Transkit
Designed for AutoArt Toyota 86 / Scion FRS

Instruction

Parts list:

- Rocket Bunny V2 86 body kit with LED headlight clear parts x1 set
- Dai Yoshihara canard x1 set
- 19" Work Wheels Miester M1 with rubber Dunlop Z2 tires x1 set

Before you build: (A)

A. Easy way:

The kit we designed can be directly fit on the original body without trim, you can place the body kit on the body and paint the color same with original paint. Just low the suspension and set the camber of the wheels, then you can build your Rocket Bunny V2 86 fast and clean.

Before you build: (B)

B. Full works:

If you want to build a unique color and working on the miniature like a real car. You can use paint remover to remove the body paint. (Before you apply the paint remover, you **MUST** take apart and remove all of the plastic parts out from the die-cast body.) After the paint remove, you can trim the original fenders that allowed the wheels go lower.

The marked can be cut and trim like real car installation. Allowed the wheels fit perfectly with stance fitment.

Sample Built

Optional:

Eightyone LED Lighting System

<http://www.eightyone81.com/led001-led-lighting-system/>

The LED system we develop for any scale model cars. Recommend for 1/18 AutoArt model cars, it will make the different!
